Cantilevered For Long Eye Relief Scopes, Plus 45/ Offset Rails For Secondary Sights

The Rapid Acquisition Multisight Platform (R.A.M.P.) is a one-piece cantilever mount with integral scope rings that positions optics farther forward to provide 1 $\frac{3}{4}$ " of extra space at the rear for mounting a long eye relief scope, night vision device, or magnifier. Features removable MIL-STD 1913 Picatinny rails on the left and right sides that let you mount secondary sights 45° off-axis from the main optic. Each top ring strap is secured with four Torx® screws for recoil-proof holding power. Two large hex nuts and 3 $\frac{3}{4}$ " long steel clamping bar lock the mount to a Picatinny receiver rail. Smooth contours and radiused edges give a streamlined appearance, reduce weight, and prevent snagging. Models available for 1" or 30mm scope body.
